

*The Platanen development consists of 23 Scandinavian-style houses laid out in four rows.*

## Platanen Hof Unterägeri / ZG

# «For this job, Optivis was the only solution»

**So says a very satisfied Werner Iten, the sanitary engineering contractor. The Platanen Hof development was completed within a record time of just under 10 months. A combination of the Optivis masking-wall system with the tried and tested Optiflex sanitary installation system proved to be the fastest and most efficient solution.**

While the houses in the Platanen Hof development are all built on a concrete foundation, the frame consists entirely of timber units supplied by local contractors. In view of this method of construction, Werner Iten – a long-time user of

Nussbaum equipment – decided that he would test the suitability of the Optivis system before the start of building.

*Bathroom installed using Optivis.*

### Test passed with flying colours

The results of the testing and the subsequent implementation phase clearly demonstrated that the right solution was a combination of the Optivis masking-wall and the versatile Optiflex sanitary installation systems. Optivis consists of rails, metal uprights and prefabricated panels. The modular design adapts easily to every space and situation and installers particularly appreciate the speed of

assembly. In the particular case of the Unterägeri development, the combination of Optivis and Optiflex saved time and money. It proved possible to obtain excellent results whether with masking-wall or with rear-wall mounting, the latter method being especially useful in constricted spaces such as the separate WCs.

Werner Iten (right) with two of his employees:  
**«When the moving-in date has been fixed before building even begins, then every second counts.»**

## Optipress and Optiflex for hot and cold water

«We used Nussbaum products throughout the development because quality is of paramount importance in sanitary installation works.» Werner Iten, the sanitary installation contractor, has been using Nussbaum systems and taps for many years.

*This central water supply unit has been installed in every house and it meets every requirement.*

*The hot-water connector with boiler drain-cock can be fitted in any direction and to any system.*

The tried and tested Optipress system with stainless steel pipes and special red brass fittings was used for the basement distribution runs and rising mains. For distribution runs inside the house, the contractor used Optiflex, a versatile installation system employing black PE-Xc pipe and screw or press connections. When it came to taps and fittings, Nussbaum products were again the first choice. In the unanimous opinion of the 19-strong Werner Iten installation team:  
 «We have nothing but good to say about our experiences with Nussbaum products and service.»

### Platanenholz development

Main contractor / Site supervision	Heinz Häusler, Architect, 6314 Unterägeri
Planning	Heinz Häusler & Partner, Architektur AG 6314 Unterägeri
Sanitary installation works	Werner Iten, Sanitary Engineers/Plumbers 6314 Unterägeri

**Making sure things go swimmingly in your domestic water system.**
