

The renovated block of 12 apartments in the Kleegärten area of Visp.

Renovated apartment block in Visp/VS

Fast, easy and good-looking – with Nussbaum

«For us, the key factors are inter-system compatibility and being able to purchase everything from a single source,» say the managers at Otto Stoffel AG. Tight schedules make it doubly important to have a solid contact for materials and expert advice – which is why this well-known regional operator has for decades preferred Nussbaum products.

Olga Theler, in charge of planning and site management:

«I knew I could depend on Otto Stoffel AG with their Nussbaum systems, and that made things so much easier and simpler.»

Twelve apartments given a total makeover

The roof, exterior cladding, windows and kitchens were renovated two years ago. Phase 2 of the project got underway in May 2000 and three months later, the apartment block shone like new from top to bottom. The tenants had been informed of the phased renovation program well in advance, so everyone knew there would be three or four weeks of havoc in their apartments: as well as the bathrooms, floors and walls

were replaced and electrical installations beefed up. Thanks to Olga Theler's careful planning and construction management, renovation work proceeded without a hitch.

The Optivis masking-wall system, combined with the Nussbaum toilet flush tank and the flexible Optiflex^{plus} system, brought major time savings during installation.

Full speed ahead with Optivis

Stoffel AG's plumbing fitters delivered a clear verdict: «Working with Optivis is a real pleasure.» The Optivis masking-wall system and the Optiflexplus plumbing system were used in all twelve bathrooms. Fitting Optivis is a simple and speedy task. The system adapts to any space situation, and comes with a complete range of accessories. Renovation at Visp used the Optivis toilet module, consisting of the Nussbaum flush tank with regular/water-economizer system that is child's play to integrate and makes fitting work even more efficient. A matching actuator panel in a choice of eight colors operates the tank, and includes a water-saving manual flush stop and individual water quantity adjustment.

Smiling faces among the Otto Stoffel AG fitters. They have every right to be satisfied at a job well done.

One supplier, one solution

Tight schedules posed no problem for Daniel Dumoulin of the Otto Stoffel AG plumbing company, because he could source all the materials needed for the installation from Nussbaum's local branch in Brig. In addition to the products already mentioned, mains risers used the high-quality Optipress plumbing system, while the distributor batteries and building valves also came from Nussbaum. The unanimous verdict of all involved: faultless delivery and excellent professional advice.

Daniel Dumoulin, project manager at Otto Stoffel AG (left) and Marcel Wyer of Nussbaum's branch in Brig: their smiling faces testify to a highly successful collaboration.

Involved in construction

Building owner:	Vreni & Peter Anthamatten-Schmidt, CH-3930 Visp
Planning and site management:	Olga Theler, CH-3902 Brig-Glis
