

*The development stands on the outskirts of Wil. Thirty out of the 45 apartments had already been sold before completion.*

## Thuraupark development at Wil (SG)

# «Incredibly fast, thanks to Optivis»

The Thuraupark development consists of 5 units, each block comprising eight 4½-room apartments and one 5½-room penthouse.

Nussbaum's Optivis masking-wall system was used to fit all 45 apartments and every member of Manfred Somm's installation crew agreed that the work went incredibly fast. The combination of Optivis and the Nussbaum Optiflex press system permitted complete rationalization, and the T-piece installation behind the masking-wall proved to be a big advantage.

*The flexible Optivis masking-wall system was used for all of the bathrooms.*

Chief installer Manfred Somm:  
«Now even the boss is 100% convinced by Optivis.»

## No complications

In all of the 4½-room apartments, a solid partition wall has been fitted between the bathroom and the guest bathroom. This wall, which is constructed with Optivis components, conceals all of the pipework for the bath/shower, sink, and toilet. The installation required detailed planning and this is where the professional advice of the Nussbaum team proved invaluable. As a result, the work was simplicity itself.

*Nussbaum plumbing systems and valves and fittings for every stage in the network.*

## «A reliable partner is crucial»

The plumbing contractor, Joseph Schönenberger, sums it up like this: «When it comes to this sort of project, you've got to have the right partner. It is essential to have compatibility, with all systems – plumbing, masking-walls, and building valves – available from the same source. We chose Nussbaum because we know they are flexible, they deliver on time, and they give good advice. We have always had good experience with them.»

*Laying Optiflex pipes to the individual apartments.*

*Joseph Schönenberger (left) and his team. «We especially appreciated the professional advice and commitment of Fredy Neukomm at Nussbaum's St. Gall branch.»*

## All from the same source

Nussbaum's stainless steel Optipress system was chosen for the basement distribution pipes and the rising sections in the Thuraupark development. Once again, the system was praised for its versatility, simple installation, and reliable press connections.

For the individual apartments, the contractors relied on the tried-and-tested Optiflex system, with black PE-Xc pipe and two screw and press fittings. Nussbaum also supplied the main building valves, the basement distribution valves, and all stopcocks for the individual apartments.

## Making sure things go swimmingly in your domestic water system.
